

4" Dia. Offset Flue Pipe

Installation Instructions

Model 9016970

These instructions are primarily intended to assist qualified individuals experienced in the proper installation of heating and/or air conditioning appliances. Some local codes require licensed installation/service personnel for this type of equipment. Read all instructions carefully before starting the installation. Specifications or designs subject to change or discontinuance without notice and without incurring obligations.

This accessory is designed to provide proper flue system alignment when replacing a Home or Miller model MMG furnace with a model CMF.

The offset flue pipe connector allows the installer to use the same opening in the roof as the MMG flue, avoiding the need to cut another hole. An approved system consists of a CMF furnace, SRJ series vent system, offset flue pipe and connector pipe.

Install the offset flue pipe to the flue outlet on the furnace, as shown in the sketch. Be sure to secure the connector in place using a #10 sheet metal screw. Make certain all flue pipe connections are tight and do not leak.
